Almond Orchard & Vineyard
Courtland, CA

Property Information

Location:	From Interstate 5 take exit 504 and go west on Hood Franklin Road for 2.4 miles. Go left on CA Highway 160 for 2.4 miles. Turn left onto Lambert Road and go 2.8 miles. The entrance to the property will be on the south side of Lambert Road. Showings by appointment only. DO NOT DRIVE ONTO THE PROPERTY WITHOUT PERMISSION!
APN#:	Sacramento APN's: 146-0380-013, 014, 032, 033, 043, 046, 047, 048
Orchard & Vineyard:	35 Acres 5th Leaf Almonds: 50% Nonpareil, 25% Aldrich, 25% Wood Colony on Krymsk 86 30 Acres 4th Leaf Almonds: 50%Nonpareil, 25% Aldrich, 25% Wood Colony on Krymsk 86 20 Acres 6th Leaf Vineyard: Petite Sirah on 10114 rootstock 40 Acres 30th Leaf Vineyard: Merlot on 5C rootstock
Soils:	The farm is comprised of Class II & III Soils. Please review the attached soils map for more information.
Water:	There are two surface water rights on the subject property: <ol style="list-style-type: none">1) Riparian Right to Snodgrass Slough.2) North Delta Water Agency Settlement Contract <p>This property had more than enough irrigation water available during the 2014-2015 drought. North Delta Water is very reasonable. This orchard & vineyard have one of the most reliable and inexpensive water supplies in California.</p> <p>The orchard is irrigated via micro sprinklers and drip irrigation.</p> <p>The vineyard is irrigated via drip irrigation</p>
Leases & 2020 Crop:	The orchard & vineyard are not leased, but are custom farmed. The custom farmer may be interested in continuing the relationship with a new buyer.
Oil, Gas & Mineral Rights:	The oil, gas, and mineral rights on the subject property owned by the seller will transfer to the buyer at the close of escrow.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Sacramento County, California
Survey Area Data: Version 18, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Data not available.

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Courtland, CA

Description

Land capability classification shows, in a general way, the suitability of soils for most kinds of field crops. Crops that require special management are excluded. The soils are grouped according to their limitations for field crops, the risk of damage if they are used for crops, and the way they respond to management. The criteria used in grouping the soils do not include major and generally expensive landforming that would change slope, depth, or other characteristics of the soils, nor do they include possible but unlikely major reclamation projects. Capability classification is not a substitute for interpretations that show suitability and limitations of groups of soils for rangeland, for woodland, or for engineering purposes.

In the capability system, soils are generally grouped at three levels-capability class, subclass, and unit. Only class and subclass are included in this data set.

Capability classes, the broadest groups, are designated by the numbers 1 through 8. The numbers indicate progressively greater limitations and narrower choices for practical use. The classes are defined as follows:

Class 1 soils have few limitations that restrict their use.

Class 2 soils have moderate limitations that reduce the choice of plants or that require moderate conservation practices.

Class 3 soils have severe limitations that reduce the choice of plants or that require special conservation practices, or both.

Class 4 soils have very severe limitations that reduce the choice of plants or that require very careful management, or both.

Class 5 soils are subject to little or no erosion but have other limitations, impractical to remove, that restrict their use mainly to pasture, rangeland, forestland, or wildlife habitat.

Class 6 soils have severe limitations that make them generally unsuitable for cultivation and that restrict their use mainly to pasture, rangeland, forestland, or wildlife habitat.

Class 7 soils have very severe limitations that make them unsuitable for cultivation and that restrict their use mainly to grazing, forestland, or wildlife habitat.

Class 8 soils and miscellaneous areas have limitations that preclude commercial plant production and that restrict their use to recreational purposes, wildlife habitat, watershed, or esthetic purposes.
